

ATTREW SYSTEMS - 0837099939

VERISTERI was established due to the urgent need to eradicate the spread of **COVID-19** virus among humans. The effectiveness of hampering the virus through creating a sanitary safe zone where possible human vectors are sanitized has never been more important. The **SANI** and **STERI** tunnel range are perfect for this goal. Help us at **VERISTERI** to create a sanitized safe South Africa

APPLICATION

A safe sanitization product is sprayed through high pressure nozzles to create a super fine mist. The particles cover the individual from head to toe in 5 seconds. This is a safe way to combat the spread of the virus and flatten the infection curve.

ADVERTISING SPACE

The pvc exterior material of the tunnel not only serves to seal in sanitization mist but also as advertising space as these tunnels will be seen all around South Africa.
